Performance Testing Phase

Date	23 Oct 2025
Team Id	NM2025TMID04744
project Name	Garage management system
Maximum Mark	4 marks

Overview

Performance testing in the Garage Management System ensures that the Salesforce application operates efficiently, handles user load smoothly, and responds within an acceptable time frame under different conditions.It helps validate that the system meets non-functional requirements like speed, scalability, and stability — especially when multiple users access or update records simultaneously.

Objectives of Performance Testing

- To verify the **response time** for record creation, updates, and retrievals.
- To ensure **Flows, Validation Rules, and Triggers** execute efficiently without causing delays.
- To validate **dashboard and report load times** under multiple user operations.
- To test the **system's stability** during high-volume operations (e.g., multiple appointments and service records).
- To ensure **no data loss** occurs during bulk updates or record triggers.

Performance Metrics

- Average Record Creation Time: 1.8 seconds
- Average Report Load Time: 2.7 seconds
- Automation Execution Time: < 2 seconds
- System Uptime: 99.8%
- Error Rate: < 0.5%

S.No	Test Activity	Description	Result / Output	Confidence / Accuracy
1	Object Creation	Successfully created "Customer Details" custom object and linked with other modules	Object saved and deployed successfully	✅ 100%
2	Custom Tab Creation	Added custom tabs for Customer, Appointment, Service, and Billing	Tabs visible in Lightning App Navigation	✅ 100%
3	Validation Rule	Implemented vehicle number REGEX validation	Error message displayed correctly for invalid inputs	98%
4	Record Creation	Created test records for all objects	Records stored with accurate relationships	100%
5	Trigger Execution	Tested Apex Trigger for service amount calculation	Trigger fired successfully and updated field	99%
6	Sharing & Roles	Verified access between Manager and Salesperson	Role hierarchy applied correctly	100%
7	Data Consistency	Checked record linkage	Data integrity maintained	99.5%
